

Transitions

Place the transition in the "ALT" field.

	slideleft
	sliderright
	slideup
	slidedown
	pushup
	pushdown
	popup
	popdown
	fade
	fade
	fadefast
	flipleft
	flipright
	swapleft
	swapright
	cubeleft
	cuberight
	slidetopup
	slidetopdown

Touch Application Prototype (TAP) Cheatsheet

TAP version 0.45 | UNITiD | Sebastian Conijn

Resolutions

	Normal	Loading
	320 x 480	320x460
	640 x 960	640 x 940
	768 x 1024	768 x 1004
	114 x 114	

Gestures

	swipeleft
	swiperight
	swipeup
	swipedown

Usage

target: <gesture>, <page>, <transition>

Example

target: swipeleft, index, slideleft

Timers

1. Make a hotspot
2. Give it a link to the result
3. Target is timeout=3000

target: timeout=<milliseconds>

Landscape page

To make a landscape page, just name the page in fireworks with a "l".

name: index_l

Back button

1. Make a hotspot
2. Only fill the "alt" tag with "back".
3. That's all!

alt: back

Call, alert, email and links

Example of call

link: tel:+3161234567

Example of alert

link: javascript:alert('message!')

Example of mail with subject

link: mailto:info@email.com?subject=hey

Example of website

link: http://www.unitid.nl

Transparent overlay

1. Make a hotspot
2. Give it a link to the overlay
3. Type in target "keep"

Example

target: keep

On the page of the overlay place a hotspot with a link where the target is clear. This releases the background image so it won't show up on other overlays.

target: clear

Demo's

iPhone: http://ipro.to/tap_iphone

iPad: http://ipro.to/tap_ipad

Enter this URL in Safari on your iPhone/iPad.

Memory

1. Make a hotspot on the page you want to remember
2. Give the page a link and transition.
3. The target is m1, m2, etc

target: m1

4. If you want to go back to the page in the memory, type in the link-field #m<number you used>.

link: #m1

Add-on's

1. Create a folder "addons"
2. Create a page with the extension ".htm"
3. Place the embed code and give the container:

```
position: absolute; z-index: 88;  
top:...px; left:...px;
```

Tips & tricks

For the best quality, save the page as a PNG32.

For large prototype, save space by saving as JPG

If you are checking out your prototype in Safari (or another browser) simply press the letter "B" to return to the build page.

To test out landscape-portrait behavior in a browser, use the shortcut "shift-arrowleft" or "shift-arrowright".

Delete all the files in the Library folder before doing an export from Fireworks, save a lot of OK-ing messages.

It is recommended to read the "TAP" article on the website for more information. You can find a tutorial and other useful tools on our website.
